Education

San Jose State University — San Jose, CA
Master of Science in Applied Data Intelligence — *January 2026 – Present*

The National Institute of Engineering — Mysore, India
Bachelor of Engineering in Information Science — *June 2014 – May 2018*

Technical Skills

Programming & Query Languages: Python, SQL, JavaScript, TypeScript
Data Analytics & Statistics: Data Cleaning, Exploratory Data Analysis (EDA), Statistical Analysis, A/B Testing, KPI Reporting, Advanced SQL, Window Functions, CTEs
Data Visualization & BI: Tableau, Power BI, Excel (Pivot Tables, XLOOKUP), Matplotlib, Jupyter Notebook
Data Engineering & Warehousing: ETL/ELT, Apache Spark, PySpark, Apache Airflow, Snowflake, dbt
Databases & Development Tools: MySQL, SQL Server, Pandas, NumPy, Git, GitHub, REST APIs

Experience

Website Development & UX Design — Aug 2026 – Sept 2026
Books That Build Skills (Athenian) — *Remote*

- Evaluate website content, navigation, and user journeys across key stakeholder segments, including parents, students, donors, and sponsors, identifying usability gaps and communication inconsistencies
- Assess calls-to-action, donation and sponsorship pathways, and program purchase flows across desktop and mobile experiences to identify friction points in user engagement
- Develop prioritized recommendations to improve content clarity, navigation structure, and conversion pathways, translating audit findings into actionable website improvement strategies

Website Content Audit Volunteer — Jul 2026 – Sept 2026
Sustainable Marin Schools — *Remote*

- Conducted a structured audit of existing website content to support migration from Weebly to Wix, developing a page inventory documenting content purpose, target audiences, messaging gaps, and recommended actions
- Analyzed organizational content, including mission statements, vision, values, brochures, grant applications, and impact reports, to identify inconsistencies, content gaps, and opportunities to improve stakeholder communication
- Synthesized audit findings into a content assessment report with prioritized recommendations for retaining, revising, and consolidating website content across volunteer, donor, and community partner audiences

Web Designer & Accessibility Volunteer — Sep 2025 – Feb 2026
CenterLink, Inc. (LGBTQ+ Community Alliance) — *Remote*

- Designed, developed, and configured an organizational website using Weebly CMS, structuring pages and navigation to improve content accessibility and user experience
- Implemented WCAG 2.1 accessibility practices, improving content readability, navigation consistency, and accessibility across website pages
- Standardized website branding, including typography, color schemes, page layouts, and reusable design elements to establish a consistent visual identity
- Organized website content and information architecture, refining page hierarchy, navigation pathways, and content placement to improve information discoverability
- Configured and optimized website layouts for desktop and mobile devices, ensuring consistent presentation and usability across screen sizes

Frontend Developer — Jun 2018 – Jun 2022
Larsen & Toubro Technology Services — *India*

- Developed the Halliburton DSIS Web Framework, implementing theme support for PrimeNG and Angular Material components to establish consistent UI styling across the application
- Developed unit test cases using Jasmine and Karma, and configured Jest as the default test runner to support the application's Angular migration

- Enhanced 2D well schematic visualization and usability within the Clariti platform, working with Wellbore Planner and SeisWorks
- Integrated CesiumJS to enable interactive geospatial visualization and location tracking of well structures within web-based applications

Projects

Supply Chain Delivery & Profitability Analysis | *Python, Pandas, SQL, DuckDB, Matplotlib, Seaborn*

- Analyzed 180,519 product-line records representing 65,752 unique orders to evaluate delivery reliability, shipping performance, and profitability across five global markets
- Designed an order-level analytical table by aggregating multi-item orders, validating repeated order attributes, and excluding sensitive customer fields and unusable columns
- Built a data-quality audit and SQL analysis workflow in DuckDB to identify a 57.3% late-delivery rate and an 18.8% loss-making order rate
- Found that First Class shipping had a 100% late-delivery rate compared with 39.8% for Standard Class, while loss-making rates remained similar across shipping modes
- Created publication-ready visualizations comparing shipping reliability, regional performance, discounts, and profitability, and documented operational recommendations in GitHub

LLM-Powered Semantic Book Recommender | *Python, Pandas, LangChain, Chroma, Gradio*

- Processed and cleaned 6,810 book records using Pandas, filtering incomplete metadata and descriptions under 25 words to produce 5,197 analysis-ready records for downstream processing
- Generated semantic embeddings from book descriptions using OpenAI and LangChain, indexing vectors in Chroma to enable natural-language similarity search across the catalog
- Evaluated zero-shot fiction classification using BART-large-MNLI on 600 labeled descriptions, achieving 77.83% accuracy before classifying 1,454 previously unlabeled records
- Developed an interactive Gradio recommendation interface that retrieves 50 semantic candidates and presents up to 16 recommendations based on category and five user-selected emotional tones
